The combination of different solutions of the FinFisher™ portfolio for IT Intrusion, remote access, deployment methods as well as know-how transfer is applicable with various operating systems for notebooks, PCs, smart phones and tablet computers. This way, FinFisher™ guarantees the utmost best investigative results.

Remote Monitoring
& Deployment Solutions

Tactical IT Intrusion Portfolio

IT Intrusion Training Program

MONITORING SUSPECTS
Decrypt and monitor encrypted communication via webmail, VoIP communication or social networks, having full file access and recording of webcam, screen and microphone.

BYPASS ENCRYPTION
Unlock running or switched off target systems of any operating system and get direct access to fully encrypted files without losing valuable evidence and time.

INFORMATION GATHERING
Identify targets tactically and join their wireless or wired networks to intercept encrypted communication by redirecting the traffic.

KEEPING YOU UP-TO-DATE
Get regular updates and upgrades for all products and solutions. Our After Sales support allows proactive troubleshooting and operational consultancy.

COVERT DEPLOYMENT
Use web based attacks, 0-day exploits or software infection methods within wireless or wired LANs as well as ISPs to fully deploy covertly remote access solutions.
