

CYBER INTELLIGENCE ASIA

12-15 March 2013, Royale Chulan Hotel, Kuala Lumpur, Malaysia

The launch of *Cyber Intelligence Asia* took place at the Royale Chulan Hotel in Kuala Lumpur with approximately 90-100 attendees present.

The event attracted delegations from 16 countries to discuss the latest cyber security policies and strategies in their respective countries. Cyber Intelligence Asia had delegates from the following government organisations/agencies: *National Security Council (Malaysia), CyberSecurity Malaysia, Prime Minister's Department (Malaysia), Sabah State Computer Services Department (Malaysia), MIMOS (Malaysia), CamCERT, JPCERT, ID-CERT, IMPACT, ITU, US Government, Information Technology Authority (Oman), DIWAN (Oman), Ministry of Defence (Singapore), DSO Laboratories (Singapore), FBI (USA), US Department of State, US Embassy, German Embassy, Hong Kong Police Force, United Nations, Ministry of ICT (Thailand) and Russian Law Enforcement Agency.*

With the support and assistance of CyberSecurity Malaysia the event was opened by *Ir. Md Shah Nuri Bin Md Zain, Under Secretary Cyber & Space Security Division, National Security Council, Prime Minister's Department, Malaysia* who provided an overview of cyber security in Malaysia and how the National Security Council interlink with the local law enforcement agencies and other government departments such MICC, AGC and MOSTI.

Day One continued with an overview of Cyber Security issues and challenges in Malaysia from the Peninsula and Sabah State, before moving to a global perspective by the International Telecommunications Union (ITU) and IMPACT who delivered presentations on their work across the globe encouraging international cooperation similar to the Budapest Cybercrime Convention.

The afternoon of Day One focused on neighbouring countries in ASEAN with presentations discussing DDoS attacks and cyber-crime updates from Japan and Thailand.

The conference concluded with a drinks reception in the exhibition hall kindly hosted by Deloitte providing great networking opportunities for the public and private sector attendees to discuss the latest solutions available and what is currently needed by the public sector to combat cyber-crimes.

The exhibition included companies from across ASEAN and USA: *Codonomicon, DataExpert Technology, EC-Council Academy, ElcomSoft, Emerging Threats, Hacking Team, Transition Asia and Websense.*

During the conference on day one we heard insightful presentations from Websense and EC-Council Academy. Brandon Tan from Websense presented on the "*Seven stages of advanced threats and data theft*" and Drew Williams from Condition Zebra/EC-Council Academy discussed "*The virtues and vices of BOYD*".

Day Two started with an opening address by the *Honourable (Prof.) Howard Schmidt* who provided the audience with an overview of cyber security in the US and the recent executive order that President Obama and his Administration have put forward. Professor Schmidt urged for more dialogue between public and private sector and that there needed to be common ground made between the US and China rather than accusing each other over cyber-attacks.

This was followed by Matt Jonkman, CTO and Emerging Threats who discussed the latest Malware solutions and IDS update.

The morning session ended with presentations from the Russian Law Enforcement Agency and ElcomSoft who discussed threat intelligence and overcoming data encryption.

After lunch the focus was on the regional CERT's who provided a more technical overview of issues faced in their respective countries. Presentations from CamCERT, ID-CERT, JPCERT allowed the audience to hear case studies from these countries that gave a great insight to the challenges CERT's are faced with on a weekly basis.

The conference finished with a presentation by Bruce Wynn who provided the audience with an insightful look into the world of a hacker and provided a good summary of the conference that had taken place over the last couple of days.

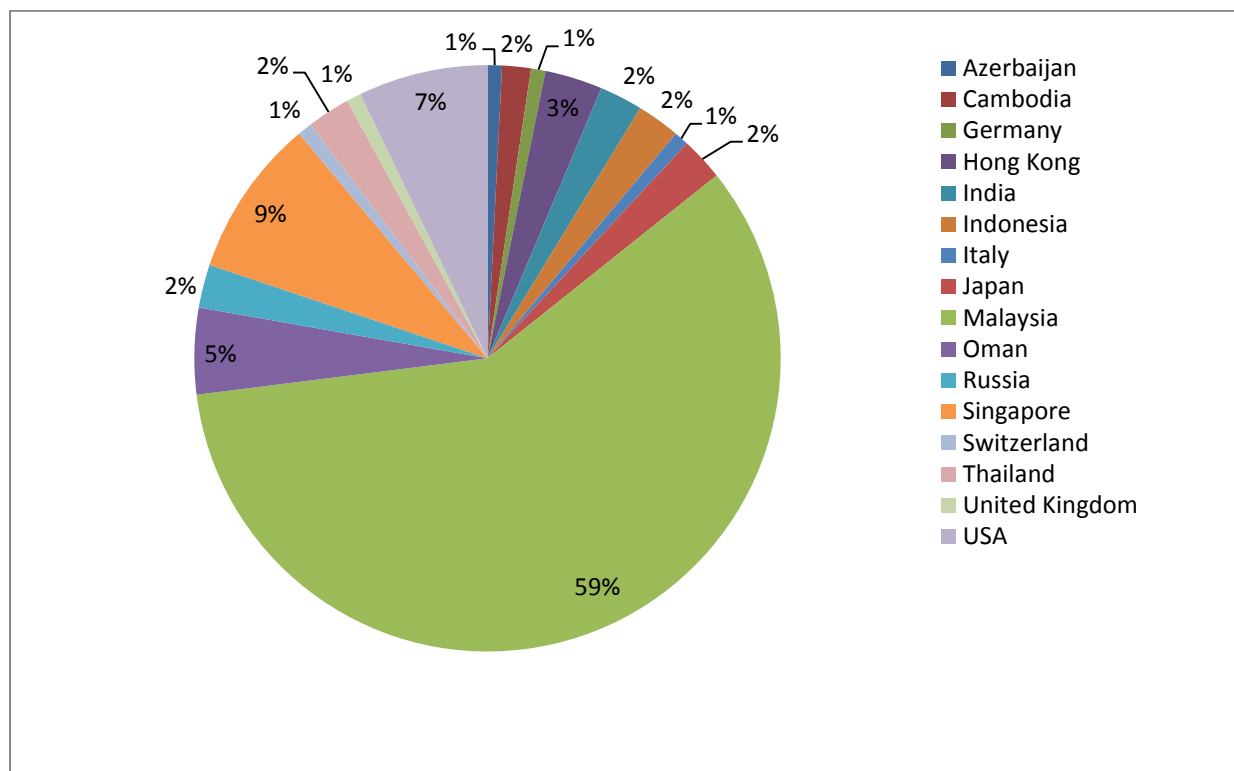

Intelligence-Sec would like to once again thank CyberSecurity Malaysia for their continued support and assistance in the build-up to the event and during. We hope that we can bring this event back to Malaysia in the near future and make the conference and exhibition develop as we continue to build awareness on international cooperation on cyber security issues.

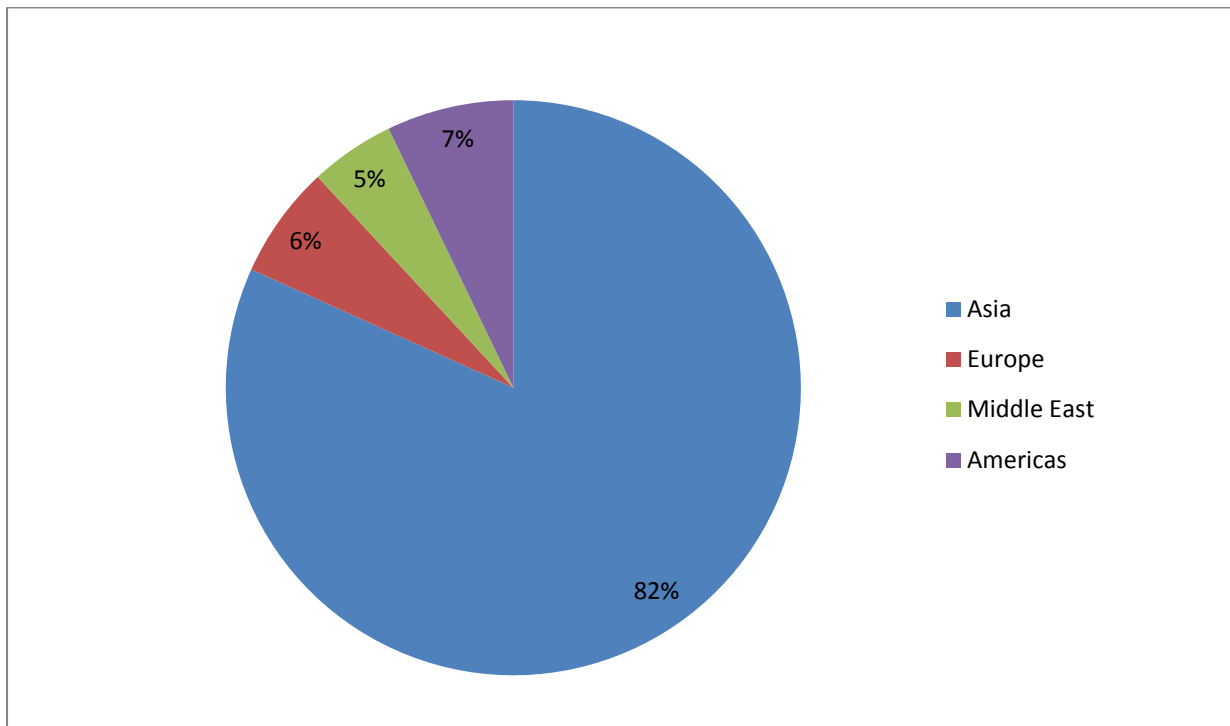

We would also like to reserve special thanks to the sponsors and exhibitors who saw this event as a great opportunity to promote their latest solutions and technologies without their support the event would lack the knowledge the private sector can bring to the cyberspace world.

Intelligence-Sec hope that you enjoyed the Cyber Intelligence Asia conference and exhibition and we hope to see you next year in Singapore where we will provide new perspectives to cyber security and greater networking opportunities for the ASEAN public and private sector.

Thank you for supporting Cyber Intelligence Asia. See you next year

Delegate Breakdown by Country

Delegate breakdown by Region**About the organisers Intelligence-Sec Limited**

Intelligence-Sec is a fully integrated Conferences and Exhibitions Company creating targeted well thought out four day events to keep you fully up to date with all the topical subjects in the security industry. Our employees are fully up to speed, and passionate about security and aim to provide you with the best industry events across the globe. With full experience of operating in global markets we ensure that our clients are 100% satisfied with our services. We aim to work to your requirements and are fully flexible so that you gain the best possible return on investment at our events.

Intelligence-Sec employees have extensive knowledge in the events and security industry. We work with local government agencies to ensure the best quality of knowledge and up to date topics are being discussed at our events.

We ensure that each event Intelligence-Sec deliver is thoroughly researched to provide subject matter of a high standard. We strive to engage the best industry speakers from across the globe in order that you receive a full perspective of the event focus when you participate.

What can you expect from us? Intelligence-Sec will work with you to make sure our events are the best possible and that you leave fully satisfied with the experience you have had and nothing less.
