What's new in Remote Control System Update 9.5.2

Agent (Windows)
• Enhancements AV evasion
• Fixed the retrieving of gmail data from IE11

Agent (Android)
• Enhancements AV evasion
• Mic enhancements
• Better persistency and uninstall support
• Fixed the duplication of messages in Whatsapp and Wechat

Console
• Fixed an infinite loop that caused the console to hang when showing the audit log

Database
• Fixed the export of "only marked for report" evidence

How to install the update

The update can be installed on any 9.5.x version. It's a cumulative update.

9.5.2 specific instruction:

• Run the installer rcs-setup-*.exe on each backend server and answer 'yes' when asked to upgrade
• Run the installer rcs-setup-*.exe on each frontend server and answer 'yes' when asked to upgrade
• If you have previously installed the rcs-ocr-*.exe on the shards, you have to reinstall it as well.
• The Network Injector has not been changed, so you can use the 9.5.0 installer.
