

# Multi – Level System of Voice Biometrics

Matvey Zhokhov
International Sales Manager
Speech Technology Center

ISS World Europe, Prague, CZ October 3, 2008

# About Speech Technology Center

Leading provider of speech technologies and security equipment

- Founded in 1990
- International ISO-9001:2000 certificate
- Member of International Biometric Society
- All proprietary technologies are patented
- Hardware units are CE/FCC certified
- Over 250 employees, 23 PhD
- Client base in over 60 countries

#### Our Solutions

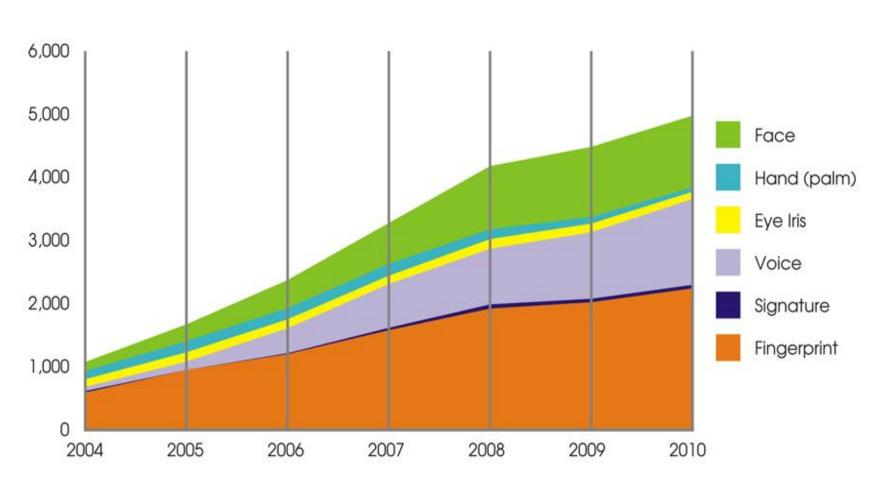

Comprehensive product line for government agencies and corporate clients:

- → Voice Recording
- Noise Cancellation
- Biometric VoiceVerification and Identification
- Forensic Audio Analysis
- → R&D projects

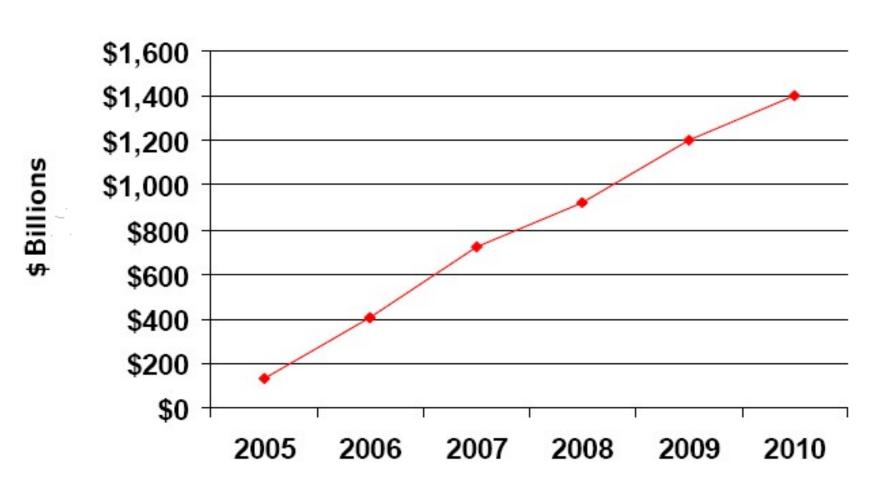

# Biometric Systems Demand Growth

materials from the reports of Dan Miller, Senior Analyst, Opus Research

## Voice Biometrics – Voice Patterns Analysis

materials from the reports of Dan Miller, Senior Analyst, Opus Research

#### Voice Biometrics in LEA and Police

Speech is the major way of communication in all fields of the human activity

Speech allows to combine communication and identification procedures

Speech

Using speech we can identify the person without any direct

# Biometric Audio Analysis Systems Tasks

#### Search

- Investigation units
- Preliminary investigation agencies

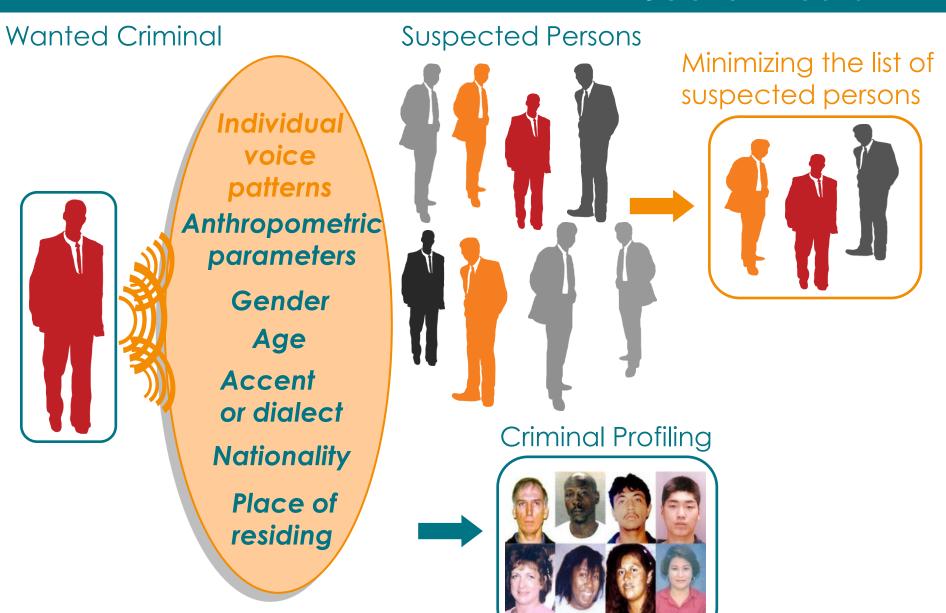

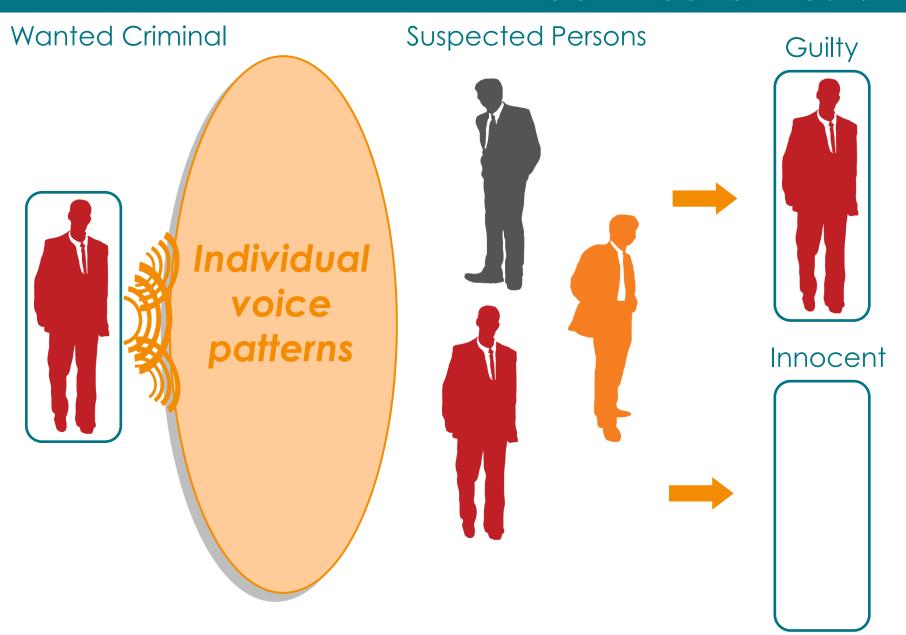

#### Identification

Audio Forensic Experts Departments

# Multi – Level System of Voice Biometrics

Automated Speaker Identity Diagnosis

# VoiceNET – Automatic Speaker Search

**VoiceNet** is a system intended for automatic speaker search.

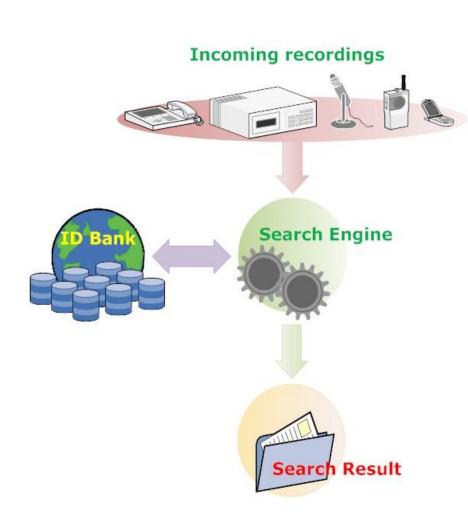

VoiceNET is widely used by

- Police and Law Enforcement
- Crime Investigation
- Audio Forensic departments

#### **VoiceNET**

- minimises the list of suspected persons
- results are used for further forensic audio analysis

#### VoiceNET Work Scheme

VoiceNet automatically compares "speaker cards" of database (suspected) and "unknown" (wanted) speakers.

#### "Speaker card" -

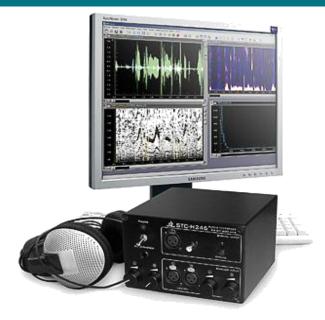

individual biometric patterns of speaker's voice necessary for identification.

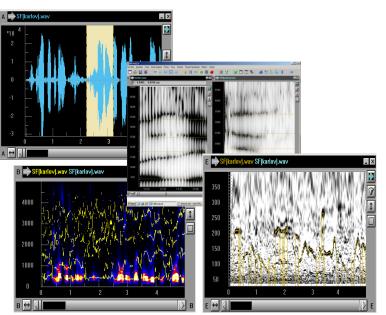

**VoiceNET** gives a result of match probability with each certain speaker.

# VoiceNET Highlights

- Fully automated. Easy and handy usage
- Supports all file formats (mono, stereo, wav, mp3, etc.)
- Works with natural spontaneous speech
- Works with poor quality recordings
- Language independent
- Requires minimum of recording duration
- Provides high level of search reliability
- Uses 3 methods of analysis (Formant, Pitch, GMM)
- High speed of search
- High system scalability

#### IKAR Lab – Forensic Audio Analysis

**IKAR Lab** is intended for forensic audio analysis and speakers identification.

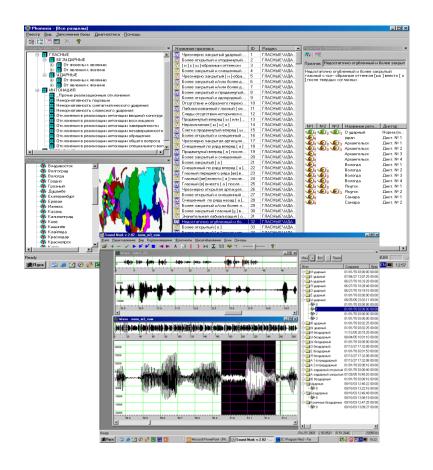

Provides a complex approach:

- Input/Output, Visualization, Editing
- Different types of audio analysis
  - Instrumental
  - → Auditory Linguistic
    - Psychological
- Noise cancellation
- Record authentication

#### **IKAR Lab is**

- An indispensable tool for forensic audio examinations
- Used in a large number of forensic labs of the world

# Region - automated speaker identity diagnosis

**Region** is intended for automated speaker identity diagnosis.

**Region** allows to receive info about:

- Anthropometric characteristics
- Age, Gender
- Accent or dialect
- Nationality, Places of long residing

**Region** is used in Crime Investigation departments.

#### Region

- Minimizes the list of suspected persons
- Greatly helps investigation to find criminals

# Region Highlights

- Accurate and reliable identity diagnosis
- Works with poor quality recordings
- → Easy, intuitive, handy usage
- → Text and language independent
- Can be developed for any language group
