

Consulting for Communication Monitoring

As part of a total service to governments and law enforcement agencies, ELAMAN provides one of the most vital and key elements in an overall security and intelligence program: technical consultancy.

- Entire technical consultancy for interception applications for existing systems and upcoming new

implementations and requirements (communications monitoring, spectrum monitoring and locating, etc.).

- Collecting new interception requirements and transforming these into technical specifications in order to define tender specifications and to approach and select suppliers.
- Recommending technical and performance improvements and support for technical evaluation of offers and suppliers.
- Providing recommendations and technical concepts for new inter-

ception solutions (e.g. monitoring of Thuraya, passive monitoring systems, satellite monitoring solutions, internet monitoring etc.).

- Providing information out of the market of suppliers for monitoring surveillance systems.
- Provision of information about existing and future interception solutions for different switch vendors (e.g. Siemens, Ericsson, Alcatel, Huawei, etc.).
- Consultancy in defining legal regulations for the act of lawful interception e.g. in case of the privatization of the countries telecommunication market.

ELAMAN works closely with clients to develop a total system solution to their needs and to ensure that they are equipped, trained and manned to meet the formidable challenges in the field of communication.

Products & Services

Bringing products, consulting and training for law enforcement agencies into an optimum, a confident and practicable overall integrated solution is the key and the basis for successful security operations. A confident solution creates the only possibility for optimal results.

Training & Services

Training is a fundamental and integral factor in the successful implementation and running of a security or surveillance operation. One of the main reasons for this is the high level of sophistication involved in the equipment required.

Recognising this ELAMAN always provides full training and technical backup for all products supplied to our clients.

- Management -, Operational- and Technical Training
- Technical Surveillance Counter Measures (TSCM)
- Communications monitoring (GSM, Internet, PSTN)
