

TSE 6801
Pocket 4 channel receiver

TSE 6801 Pocket 4 Channel Receiver

The INCA Streetfighter is the new, high performance tactical pocket receiver, especially designed for the reception of NATIA compliant narrowband signals from the range of INCA Officer Safety and Intelligence Transmitters.

The 4-channel miniature receiver combines a wide array of easy-to-use functions into an extremely small and handy unit.

The Streetfighter provides the user with flexibility and security never seen before in the audio surveillance field, fulfilling even the most demanding tactical operative field requirements.

The Streetfighter has a built-in microprocessor, controlling all standard functions and operations of the unit. It will prove itself as an incomparable tactical pocket receiver for both standard and advanced users.

Besides being equipped with a RS 232 COM-port for Depot re-programming of frequencies, cascading of receivers controlled by a Laptop computer for the reception of multiple transmitters in the field is also possible.

The Streetfighter receiver achieves high sensitivity and selectivity together with a very wide dynamic range.

The high frequency stability is based on a precision temperature compensated crystal oscillator (TCXO).

A highly efficient DC-DC converter is used to generate the internal supply voltage, draining the battery completely, and thus prolonging the operational time.

Applications The INCA Streetfighter receiver is intended for use in operations requiring:

- high reliability and flexibility to ensure maximum officer safety
- high RF sensitivity, selectivity and exceptional voice clarity
- scrambling / de-scrambling of signal transmission
- reception from officer safety transmitters in micro concealments
- long operational time
- long operating distance
- reception from ADS Eagle solid state recorders
