

TSE 6801
Remote Control Module

TSE 6801 Remote Control Module

The RCM receiver is a small digital micro-receiver designed for low probability of detection applications where size and low power consumption are of paramount importance.

As the remote receiver does not contain a local oscillator, there are absolutely no RF emissions. This is a unique feature that minimizes the risk of the unit being found by bug detectors or scanning equipment.

Delivery

- Remote Control Receiver
- Connectors to Transmitters
- Multi Channel Function
- Activated from main Receiver or Hand Held Remote Controller
