Portable IP Monitoring System

POSEIDON Mobil

Februar 2004

Intelligence for a better world

The ever increasing mobility of communication in our society with laptops, mobile phones, WLAN and PDAs also implicates some drawbacks. The mobile criminal offender takes advantage of gaps in the criminal prosecution, like monitoring of WLAN-spots, in internet-cafes, hotel rooms and on airports. With **POSEIDON Mobil** GTEN wants to help closing these gaps.

POSEIDON Mobil is a portable system for recording, reconstruction and evaluation of IP-data and their applications, e.g. email, web-sessions, chat.

POSEIDON Mobil supports surveillance teams and S.W.A.T. to receive relevant information on location immediately and guarantees the access.

POSEIDON Mobil reads the data, filters them according to predefined filter criteria (depending on

the specific usage and the legal regulations), adds a timestamp to the data and saves it in raw format in a database. Using the Analyzer User Interface the data can be reconstructed und evaluated – online or offline, residential or on location. For archiving purposes the saved raw data can be exported automatically or manually via FTP to already existing archiving media. Re-importing of archived raw data is also possible.

POSEIDON Mobil consists of three functional parts. The recording of the raw data, picked up from different kinds of communication lines, the database management for internal organizational purposes of these data and the reconstruction function to analyze and evaluate the recorded IP-based data.

The Internet has produced a veritable flood of communication options, which are also being used by criminal offenders.

GTEN AG is an innovative provider of technology and services for monitoring, recording and reconstructing of telecommunications data for carriers and law enforcement agencies.

The service concept of GTEN enables carriers and Internet Service Providers (ISPs) to meet their statutory obligations in the most cost-effective way. With the Monitoring Center offered by GTEN and with the POSEIDON product line state-of-the-art solutions are available for the law enforcement agencies to reconstruct, analyze and archive all kinds of communication data (voice, facsimile, modem and IP-data). The GTEN solutions are based strictly on the statutory specifications of the country concerned. In Germany, for instance, these are embodied in the Telecommunications Monitoring Ordinance (known under its German acronym 'TKUEV')
