GSM Network Analyzer
GSM-NA

GSM Network Analyzer – GSM-NA

Description

Sound operation of IMSI detection devices requires a precise analysis of the GSM network. The GSM-NA identifies all important data of the existing GSM networks in one particular location. Through a specific evaluation process, the user is offered a suitable radio cell to ensure sound functioning of the IMSI detection device. A tabular listing of settings also permits manual selection.
All providers present in a particular location are analysed. Identified data are stored corresponding to their location. A SIM card is not necessary.

Technical Data

GSM-Band: 900 / 1800 / 1900 MHz
Antenna: Tri-Band (SMA)
Interface: USB
Power supply: USB (5 V)
Dimensions: 160 x 55 x 30 mm
Weight: 300 g
Scope of Delivery: GSM-NA, USB-Cable, Antenna (SMA), Software, Manual, transport box
