About GTEN

Make use of GTEN's long years of experience in successful cooperation with well known network providers and law enforcement agencies worldwide, concerning IT-Security & -Forensic.

We look at IT-Security and -Forensic from a different point of view – the view of the internal and external offender. For that reason we are able to improve your IT-Security significantly and reduce your costs. With the help of our concepts and strategies we will relieve your specialists in their day-to-day work, so that they can concentrate on their principle activities.

We provide you legal certainty according to the German KonTraG, Sarbanes-Oxley, EU directives, Basel II.

Consulting

You have to assume, something has happened in your company already – but you were not aware of it. That's the reason why you should start using our IT-Security Consulting; to make the lives of offenders as hard as possible and to provide preconditions so that you are alerted about security violations as soon as possible.

Preemptive measures are used to enhance investigations so as to achieve exhaustive results without delay. That means that your systems and infrastructure will need to be analyzed and modified if necessary, to provide monitoring interfaces which can be used for future investigations by GTEN's specialists or your own staff.

IT-Forensic workflows have to be defined to ensure quick reactions on security incidents, to proceed in accordance with the laws, to save evidential material without destroying it, and last but not least; to protect the innocent. Together with our lawyers and IT-specialists we provide workflows to your staff which enable them to handle all kinds of incidents on their own, or until our specialists arrive on the scene. This includes the evaluation of all gathered information in a legal and usable way.

Investigative Measures / Results

Something has happened and you have been able – thanks to GTEN's consultancy – to react correctly and very fast. Your employees now have the possibility to make use of GTEN's Quick-Reaction-Team remotely or on location (they will be on site on short term basis).

With the help of the preemptive measures we will be able to secure all pieces of evidence (equipment and data, monitored network communications) without interrupting or disturbing your course of operations.

Consequently, we will start the evaluation and prevent any evidential material from being corrupted. It is self-evident that we are sworn to secrecy, and our employees are security-checked by the German Ministry of Interior and that they work discreetly.

What we are able to do, how we do our job and what we have done in the past, will be explained to you in every detail during a personal meeting (of course we will not divulge any company specific secrets only anonymous cases are described). You will understand for sure, that we will not discuss our experiences, procedures and techniques in public to avoid providing any details to offenders. By this means we can protect your security and to ensure that investigative measures will be as effective and successful as possible.

Bearing this in mind, you will find only a short excerpt of our services here:

- Imaging of data media and reconstruction of contents even on deleted or overwritten media
- Monitoring / recoding of data communications (phone, fax, IP-communication)
- Restoring of mailboxes
- Evaluation of reconstructed data and correlating the results to receive a total overview
- Securing the evidential material, interim and final reports, handover of all material for prosecution

Legal Aspects

We always work in accordance with existing laws and your employment agreements. For our worldwide activities we have partners having local knowledge including national regulations and approved methods.

It is an essential precondition to verify all kinds of legal aspects prior to any investigation. We need to know how to proceed and what changes have to be initiated inside the organization in order to make sure that our investigations will be successful.

Our own authorized and IT-specialized lawyers or the lawyers of our partners will advise you in advance to ensure that everything will be performed correctly.

Trainings / Workshops

We offer individual training courses, adapted to the requirements of your organization and standardized training courses in our training center, as well as on location. The following topics are covered:

- Legal aspects of IT-Security for management and employees responsible for IT
- The tricks of internal offenders and white collar criminals
- Internal Hacking, weak points of computer systems and infrastructures
- What to do in cases of security violations
- Motivation training for computer users, sensitizing computer users to security aspects, prevention of social engineering.
- Defense and counter-strike in the event of attacks
