ELAMAN ISS SUMMARY

A Warm Thank You to Our Guests

It was a pleasure to welcome you at the recent ISS exhibition in Dubai, February 25-28, where we held a joint stand with Nokia Siemens Networks (NSN).

As a follow-up to our participation at the exhibition, this newsletter will provide further insight into technical solutions on offer from Elaman, and which we look forward to presenting you personally at your premises or at our facilities in Munich, Germany.

Communication Monitoring Concept

Elaman provides clients with perfect communications monitoring solutions.

Elaman gives our clients the possibility to be the best equipped in all communication monitoring areas, which include Passive Monitoring, Computer Monitoring, GSM/UMTS Monitoring and Location Finding, Satellite Monitoring, IP Monitoring, Radio Frequency Monitoring and Room Monitoring.

Nowadays, the threats our clients are exposed to are highly sophisticated and advanced, thus the only way to be well protected from these threats is to match and surpass their technological level.

Elaman has designed all our communications monitoring systems to fit perfectly together and complement each other in all operational tasks and fields.

Surveillance Vans

Surveillance Vans Support Ford-MB-Toyota-Renault-VW-GM, etc.

Elaman will individually design surveillance vehicles to your exact requirements, meeting with you at all the major milestones during the design and integration process. This ensures that each vehicle will meet your current needs and can also be upgraded in line with future technological developments.

These vehicles are especially designed to meet individual needs, such as vehicle type, finish, operational usage, equipment for integration, and whatever you are looking for, from a very basic surveillance, command or communications vehicle, including covert satellite communications, to a complete mobile command and monitoring van.

Technical Surveillance

Elaman's philosophy is that Technical Surveillance Equipment should be offered as a whole range, from a single standalone product to a complete system solution, including training to support any government end-users goals of achieving successful technical operations.

5610 - New Video/Audio Digital Recorder

TSU Product Areas

-Surveillance vans and cars
-Digital audio surveillance transmitters
-Video surveillance covert system
-Digital audio/video covert recorders
-COFDM video transmission
-Covert methods of entry
-Low noise covert drills
-Vehicle tracking systems
-Intelligence software databases
-MIDAS intell operations software
-Audio and video enhancement

Technical Surveillance Counter Measures

To be effective in TSCM it is essential to use trained and qualified people with proper equipment and a solid background knowledge of surveillance techniques.

Elaman is in a unique position to provide knowledge and equipment to counter threats and offer training in the latest equipment and techniques involved in information gathering and surveillance. TSCM engineers are able to receive advanced training at later stages that provide more effective countermeasures. The threat level for cables/LAN/Wireless LAN has increased dramatically, and it is understood this makes up 65 percent of the threat.

Elaman provides equipment solutions including the new Wireless IT detection and location system with G2 Systems providing all the professional training services.

Intell Training

Elaman is a company backed by many years of experience in technical intelligence solutions.

One of the major foundations is our focus on the technical and operational training for both intell and TSCM, which is managed by G2 Systems.

Training is carried out at our facilities in Europe or at the end-users premises.

Finfisher
The Ultimate Surveillance Tool

Finfisher USB Suite

The FinFisher USB Suite has been engineered for use by any agent, even with minimal computer knowledge, to gain access to a target computer.

FinFly

FinFly is a transparent HTTP proxy that can modify files while they are being downloaded.

Elaman has created two versions of this software: FinFly-Lite and FinFly-ISP.

FinSpy

FinSpy is a cutting-edge, professional Intrusion Tool for Windows Systems, which enables government agencies to remotely access and monitor a target computer.

The basic functionality includes features like Skype Monitoring, Chat Logging, Keystroke Recording, accessing printed and deleted files, and many more.

The Intrusion Tool is completely hidden and all its communications are entirely covert.

Presentation

Due to the highly sensitive nature of the FinFisher, which is only for sale to authorized government end-users, please contact us to arrange a personal technical presentation.
