**Digital Video Audio Recorder**

## TSE 6502 Digital Video Audio Recorder

The Digital Video-Audio Recorder is a miniaturised, solid state, stand alone device, which can be utilised for remote video and audio logging.

The unit's small metallic enclosure and totally silent operation make it suitable for most covert activities where stealth and long-term reliability is key to success.

The unit can record stereo audio and colour or black white video from 1 to 15 frames per second, and image sizes up to 640x480 pixels utilising a standard composite video camera input.

The digital recorder will record up to tow hours of colour video and maybe expanded by adding up to eight more memory cards.

Recorded data may be transferred, viewed, edited and archived on a standard PC.

### System Features

- ◆ Colour or Black & White Video & Stereo Audio Recording
- ◆ Variety of image sizes up to 640x480 pixels
- ◆ Selectable frame rate (1-15 fps)
- ◆ Uses standard composite video camera input
- ◆ Records up to 2 hours of colour video without expansion
