GOT IT ALL! MOBILE AND VERSATILE WITH THE MINI DVR!

There are a lot of applications that call for versatile, easy to install and mobile solutions. In the car or taxi is just one example. With the Mini DVR you have a recorder the size of a cigarette pack that can record for hours. The storage media is a normal SD memory card, that can store about 120 hours of video material, depending on the card, resolution and frame rate. With its compact size and great functionality, this is a multi-talented device.

DATA ON RECORDING TIME

Depending on the quality, frame rate and the SD memory card used, you can record up to 121.9 hours of video material on one card. The table below shows you which recording times are possible with which parameters. Of course, you could always just change the SD memory card, it's so quick and easy. So, even for long recordings you don't have to dispense with image quality and you won't miss a thing.
